

AUX-ISO

Line-level Isolation Transformer

There may be situations where noise can occur when connecting multiple controllers to the same auxiliary sources. This noise can be generated by multiple causes such as ground loops, ground current, power-supply oscillations, etc. When these noise problems occur, you can add the AUX-ISO isolation transformer to the auxiliary line.

Specifications	
Transformer	600 Ohms 1:1
Frequency range	100Hz - 10kHz
Colors	Black
Connector	Screw Terminal
Recommended Wiring	22AWG-2 Shielded
Dimensions	68 x 35 x 25 mm (2-11/16" x 1-3/8" x 1")

Connect an AUX-ISO isolation transformer between each component for the auxiliary chain: between the source and the first controller, between the first and the second controller, etc.
